## **CHANGES TO THE RSICC CODE AND DATA COLLECTION**

There is one update to the RSICC catalog for those individuals that may be interested.

### **PSR-615/GRUCON**

GRUCON is used for data processing for evaluated libraries (transport and shielding) and was contributed by Institute of Physics and Power Engineering, Obninsk, Russia; National Research Center, Kurchatov Institute, Moscow, Russia; and Nuclear Data Section, IAEA, Vienna, Austria, through the OECD NEA Data Bank, Boulogne-Billancourt, France. The GRUCON software package is designed for use in reactor physics and radiation shielding applications. The term “package” indicates that GRUCON software includes a set of functional modules and an interpreter of the model scenario, written in internal command language that describes the calculation chains containing variety of input and output operations. In general cases, GRUCON performs basic functionality by providing:

- reconstruction of cross sections and cross section moments from resonance parameters in resolved and unresolved resonance ranges;
- Doppler broadening of point-wise cross sections;
- group averaging of cross section moments for resonance self-shielding factors calculation;
- reconstruction of integral and double differential cross sections from thermal scattering laws for bound nuclide in thermal and epithermal energy range in point-wise and group-wise representations;
- calculation of photon scattering cross sections and matrices from photo-atomic data; and
- preparation of radionuclide production cross sections from activation data.

GRUCON accepts a variety of forms for external data representation of the input and output data. The most widely used are ENDF and ENDF-type formats (such as PENDF and GENDF BCD and binary internal files, used in NJOY) and ACE data formatted files for Monte Carlo calculations. The BNAB and TEMBR group data tables can be prepared also. The recently developed Generalized Nuclear Data (GND) structures can be entered to be processed by GRUCON/GND for tabulated cross sections.

The package is transmitted on one CD with the references, executable, source files, env scripts, test input and data; Fortran; Linux; Windows operating systems. (P615MYCP00 NEADB ID: NEA-1899/01).

## **REGISTRATION REQUIREMENTS**

RSICC does not permit individuals to “pre-register” or “pre-order” software for use at a temporary or alternate location. The single user license and export control agreements are specific to the individual’s end use and the location at which the software will be used. During the registration process, individuals are required to provide the name of the institution at which they will use the software, an institutional mailing address and an institutional e-mail address. As an example, students that work at a location other than their university are required to update their registration with RSICC and submit a new request for any software that they intend to use after they have begun work at the new location.

## **SINGLE-USER LICENSE AGREEMENT REVISED**

The single-user license agreement has been revised to address concerns regarding changes in end-use and employment changes of individuals that have received packages from RSICC. In some instances, individuals obtain approvals from our Federal regulators for use of software packages for very specific purposes or while employed or associated with specific organizations. To address this concern, the single-user license agreement has been modified to indicate that the license is only valid for the end-use as stated in the Licensee's request and only while associated with the organization under which the request is being made. After February 1, 2015, the individual's single-user license would no longer be valid if they change their end-use or are no longer associated with the organization for which they obtained the original license. In these cases, the individual would need to submit a new request to RSICC for the package for the new end-use or the new affiliation.

## **SCIENCE EDUCATION PROGRAMS AT OAK RIDGE NATIONAL LABORATORY**

Looking for an internship or post-graduate opportunity at Oak Ridge National Laboratory? The Science Education Programs at Oak Ridge National Laboratory provide paid opportunities for undergraduates, grad students, recent graduates, and faculty to participate in high-quality research alongside world-class scientists to solve real-world problems. Opportunities are available for internships and co-ops, research appointments, and sabbaticals.

You can access all available opportunities through the website at <http://www.ornl.gov/ornl>. The Talent and Opportunity System allows you to create a profile, and then answer only 5 or 6 questions for each program or job posting for which you apply.

All levels of participants from undergraduates to faculty are encouraged to publish research papers with their mentors. Please browse through the Research Profiles on the different participants and their research experiences at the right-hand side of the bottom of the web site listed above. Also, there is a video of research participants at ORNL sharing their thoughts on how access to world-class research facilities and staff has catapulted their careers in science and technology. You can find it on YouTube at <http://ow.ly/2EQLz>.

## CONFERENCES, TRAINING COURSES, SYMPOSIA

RSICC attempts to keep its customers and contributors advised of conferences, courses, and symposia in the field of radiation protection, transport, and shielding through this section of the newsletter. Should you be involved in the planning/organization of such events, feel free to send your announcements and calls for papers via email [walkersy@ornl.gov](mailto:walkersy@ornl.gov) with “conferences” in the subject line by the 15<sup>th</sup> of each month. Please include the announcement in its native format as an attachment to the message. Please provide a website address for the event if one is available.

Every attempt is made to ensure that the links provided in the Conference and Calendar sections of this newsletter are correct; however, if the links become unavailable, please call the point of contact for the event.

### CONFERENCES

### Workshop on Multi-Physics Model Validation

The Nuclear Energy Knowledge and Validation Center (NEKV<sub>a</sub>C), INL-DOE in cooperation with the OECD/NEA Expert Group of Multi-Physics Experiments, Benchmarks, and Validation (EGMPEBV), and with the support of Nuclear University Consortium (NUC), INL is conducting a Workshop on Multi-Physics Model Validation. It will be held **June 27-29, 2017** in Raleigh, NC. The workshop is hosted by the Nuclear Engineering Department (NED) at North Carolina State University (NCSU), and is supported by corresponding focus areas in the DOE Consortium for Advanced LWR Simulation (CASL), the DOE Nuclear Energy Advanced Modeling and Simulation (NEAMS), and similar international activities. The NCSU faculty, which have been involved in national and international multi-physics code validation projects, are organizing and conducting the workshop with the support of lecturers from academia, national labs, industry and research organizations in USA and abroad. The targeted audience are professionals from industry, regulation, national laboratories and government agencies as well as graduate students, post-doctoral scholars and faculty from universities. This workshop will provide participants with understanding and knowledge of state-of-the-art concepts, principles, procedures, and challenges for validation of traditional and novel multi-physics modeling and simulation tools. There will be no registration fee, coffee break refreshments and lunches will be provided as well as one dinner/social reception. The link for registration as well as more information about for workshop organization can be found at:

<https://www.ne.ncsu.edu/outreach-engagement/workshops/multi-physics-model-validation-workshop/>

## IEEE Computing Conference

The Computing Conference (formerly called Science and Information (SAI) Conference) is a research conference that will be **July 18-20, 2017**, London, U.K. The goal of the conference is to be a premier venue for researchers and industry practitioners to share new ideas, research results and development experiences in the areas of Computer Science, Electronics and Communication. Accepted papers will be published in IEEE Xplore and indexed in various databases. Please see their website for more information at <http://www.saiconference.com/Computing2017>.

## BEPU 2018

The Best Estimate Plus Uncertainty International Conference will be held **May 13-19, 2018**, in Lucca, Italy. The objective of the Conference is to provide a forum to exchange experience and views among professionals in the nuclear industry in the development and use of Best Estimate Plus Uncertainty (BEPU) methods in safety analyses and design of nuclear installations. Please see the website for more information [www.nineeng.com/bepu](http://www.nineeng.com/bepu).

## TRAINING COURSES

Safety Analysis Report for Packaging (SARP)  
Developed and Conducted by Oak Ridge National Laboratory

### SARP Shielding/Criticality Safety Generalist and Analyst Courses

The U.S. Department of Energy (DOE) Packaging Certification Program (PCP), Office of Packaging and Transportation, is offering Safety Analysis Report for Packaging (SARP) shielding and nuclear criticality safety (NCS) courses for SARP generalists and analysts.

**The SARP Generalist Course** is designed for project managers, supervisors, NCS/shielding subject matter experts (SME), or SMEs in non-NCS/shielding technical areas (e.g., structural, thermal, package design, etc.) who need to better understand how the NCS/shielding analyses fit in the broader SARP documentation. Specifically, the Generalist Course provides an overview of the regulations and guidelines for the criticality and shielding analysis for a SARP, and the course shows how the NCS/shielding chapters integrate with the other parts of the SARP. Students in the Generalist Course will review an actual SARP document after the course material is presented to emphasize the key elements of the shielding and criticality analyses. The SARP Generalist Course will be held at Oak Ridge National Laboratory in Oak Ridge, TN, at the National Transportation Research Center, **June 5-9, 2017**.

**The Analysts Course** will provide detailed training on the radioactive material package shielding analyses and NCS evaluation fundamentals needed by analysts/practitioners (i.e., safety analysts and/or technical reviewers) to prepare and/or review technical analyses for the SARP documentation. The Analyst Course also provides an overview of regulations and guidelines in addition to detailed in-class exercises associated with the package shielding and NCS analyses. Regarding the in-class exercises, analysis teams will be faced with “staged” SARP examples in which several important decision processes in the generation of a SARP will be demonstrated and discussed. The SARP Analyst Course will be held at Oak Ridge National Laboratory in Oak Ridge, TN, at the National Transportation Research Center, **September 18-22, 2017**.

Course registration information is available at the following website link:  
<https://public.ornl.gov/conferences/sarp/index.shtml> .

Contact Douglas G. Bowen by email ([bowendg@ornl.gov](mailto:bowendg@ornl.gov)) or phone (865) 576-0315.

# Practical MCNP® for the Health Physicist, Rad Engineer, and Medical Physicist

**DATES: June 26-30, 2017**

**FEE: \$1,800 per person**

**PLACE: Los Alamos National Lab, TA00-0767-149, Los Alamos, NM, 87545**

Monte Carlo type calculations are ideally suited to solving a variety of problems in radiation protection and dosimetry. The Los Alamos MCNP® code is a general and powerful Monte Carlo transport code for photons, neutrons, electrons and many other particles, and can be safely described as the “industry standard.” This course is aimed at the HP, medical physicist, and rad engineer with no prior experience with Monte Carlo techniques. The focus is almost entirely on the application of MCNP® to solve a variety of practical problems in radiation shielding and dosimetry. The intent is to “jump start” the student toward using MCNP® productively. With a little practice and study of the examples, many will find they are able to solve problems that have, in the past, been out of reach.

**Course content:** Extensive interactive practice sessions are conducted on desktop computers. Topics will include an overview of the MCNP® code and the Monte Carlo method, input file preparation, geometry, source definition, standard MCNP® tallies, interpretation of the output file, exposure and dose rate calculations, radiation shielding, photon skyshine, detector simulation and dosimetry. Students will be provided with a comprehensive class manual and a CD containing all of the practice problems. This course has been granted 32 Continuing Education Credits by the AAHP. The course is offered by the RP2 Radiation Services Group at Los Alamos National Laboratory and is co-sponsored by RSICC. Participants must be vetted by LANL’s Export Control Office (a two-sided form will be sent upon registration to complete and submit to the EC Office) before allowed to attend. Possessing a recent copy of the MCNP® code will expedite this process. Contact RSICC directly (<https://rsicc.ornl.gov/>) if a copy of the code (and license) is desired. Note that class computers will be provided.

Registration is available online at <http://www.lanl.gov/orgs/rp/mcnp.shtml>. Non-US citizens need to register 60 days in advance to allow for necessary visitor approvals. Inquiries regarding registration, class space availability and payment options should be made to David Seagraves, 505-667-4959, e-mail: [dseagraves@lanl.gov](mailto:dseagraves@lanl.gov). Technical questions may also be directed to Tom McLean, 505-665-9944, email: [tmclean@lanl.gov](mailto:tmclean@lanl.gov).

## LANL MCNP6 Class Schedule

Website: <https://laws.lanl.gov/vhosts/mcnp.lanl.gov/classes/classinformation.shtml>

June 5-9, 2017 Los Alamos, NM	<a href="#">Introduction to MCNP6</a> Non-US citizens must register by 2017-03-13   Mon 10:30 - Fri 12:00	\$1800 or \$1500*
July 31 - Aug 4, 2017 Los Alamos, NM	<a href="#">Introduction to MCNP6</a> Non-US citizens must register by 2017-05-08   Mon 10:30 - Fri 12:00	\$1800 or \$1500*
Aug 7-11, 2017 Los Alamos, NM	<a href="#">Variance Reduction with MCNP6</a> Non-US citizens must register by 2017-05-15   Mon 10:30 - Fri 12:00	\$1800 or \$1500*
Aug 14-18, 2017 Los Alamos, NM	<a href="#">Criticality Calculations with MCNP6</a> Non-US citizens must register by 2017-05-22   Mon 10:30 - Fri 12:00	\$1800 or \$1500*
Nov 28-Dec 1, 2017 Los Alamos, NM	<a href="#">Using NJOY to Create MCNP® ACE Files &amp; Visualize Nuclear Data</a> Non-US citizens must register by 2017-09-25   Tues 10:00 - Thur 5:00	\$1200 or \$900*
Dec 4-8, 2017 Los Alamos, NM	<a href="#">Introduction to MCNP6</a> Non-US citizens must register by 2017-10-02   Mon 10:30 - Fri 12:00	\$1800 or \$1500*

## NEA Nuclear Energy Agency

We are pleased to inform you that the NEA Data Bank is co-organising the following workshops / training courses:

Date	Course	Location	Information
June 13-15, 2017	<b>FISPACT-II, Inventory Simulation Platform for Nuclear Observables and Materials Science</b>	NEA headquarters, Paris, France	<a href="http://www.oecd-nea.org/dbprog/courses/fispact-c2-summary.pdf">http://www.oecd-nea.org/dbprog/courses/fispact-c2-summary.pdf</a>
July 3-7, 2017	<b>Electron-Photon Transport Modelling with PENELOPE-2014 Physics, Code Structure and Operation</b>	University of Barcelona, Barcelona, Spain	<a href="http://www.oecd-nea.org/dbprog/courses/nsc-doc2015-3.pdf">http://www.oecd-nea.org/dbprog/courses/nsc-doc2015-3.pdf</a>

These workshops combine teaching by the authors on program physics, along with instructions on how to use the software. The courses include a large number of practical exercises.

A course may be cancelled if a minimum enrolment is not reached one month prior to the start of the course.

Course fees are refundable up to one month before the start of the course.

Should you be interested in attending, information is available at:

<http://www.oecd-nea.org/dbprog/trainingcourses.htm> or contact: [programs@oecd-nea.org](mailto:programs@oecd-nea.org)

## SCALE User's Group Workshop

**SAVE THE DATE**

# SCALE Users' Group Workshop

Oak Ridge National Laboratory, Oak Ridge, TN, USA

September 26–28, 2017

**scale**  
Nuclear Systems Modeling & Simulation

Oak Ridge National Laboratory will host a SCALE Users' Group Workshop September 26–28, 2017. The workshop will provide a highly interactive forum for a fruitful exchange between SCALE users and developers and will include a mix of short presentations, open discussions, and tutorial sessions.

Topical areas to be discussed include criticality safety, reactor physics, depletion and source terms, radiation shielding, nuclear data, and sensitivity and uncertainty analysis. Tours of ORNL facilities are also planned. More details will be soon available on our website: <http://scale.ornl.gov>.

Contact information:  
Matthew Jessee, [jesseema@ornl.gov](mailto:jesseema@ornl.gov); Germina Ilas, [ilasg@ornl.gov](mailto:ilasg@ornl.gov)

## SCALE Training Courses – Fall 2017

Training is delivered by developers and expert users from the SCALE team. Courses provide a review of theory, description of capabilities and limitations of the software, and hands-on experience running problems of varying levels of complexity.

All attendees MUST be licensed SCALE 6.2.1 users. SCALE 6.2.1 is available from [ORNL/RSICC](#) in the USA, the [OECD/NEA Data Bank](#) in France, and the [RIST/NUCIS](#) in Japan. All currently scheduled SCALE Courses are described below.

Date	Course Name and Description	Location	Cost
October 2-6, 2017	<p><b>SCALE/TRITON Lattice Physics and Depletion Course</b>            SCALE supports a wide range of reactor physics analysis capabilities. SCALE reactor physics calculations couple neutron transport calculations with ORIGEN to simulate the time-dependent transmutation of various materials of interest. TRITON is SCALE's modular reactor physics sequence for a wide variety of system types. Attendees of this course will learn how to use TRITON for depletion analysis. The TRITON training material is centered around using the NEWT 2-D transport module for 2-D depletion analysis and briefly touches on 3-D depletion analysis. The course will instruct users on the use of KENO in place of NEWT for 3-D Monte Carlo-based depletion; however, KENO is not covered in depth within this course. Additional applications of TRITON are incorporated into the training, including the creation of ORIGEN libraries for rapid spent fuel characterization calculations, defining appropriate unit cell calculations of various reactor types for cross section processing, performing restart calculations, and performing uncertainty analysis of reactor physics calculations using Sampler.</p>	ORNL Oak Ridge, TN USA	\$2000*
October 9-13, 2017	<p><b>SCALE/ORIGEN Standalone Fuel Depletion, Activation, and Source Term Analysis Course</b>            This is a hands-on class that covers the use of ORIGEN for isotopic depletion, decay, decay heat, and radiation source-terms calculations. The course features the use of the Fulcrum consolidated SCALE graphical interface and Fulcrum plotting capabilities for displaying nuclear data and results. The class includes solving activation, spent fuel, and nuclear safeguards and security analyses. This class</p>	ORNL Oak Ridge, TN USA	\$2000*

	provides an introduction to the ORIGAMI tool for convenient characterization of spent nuclear fuel with radially and axially varying burnup. Advanced applications including simulation of chemical processing, continuous feed and removal are also covered.		
October 16-20, 2017	<p><b>SCALE Criticality Safety and Radiation Shielding Course</b> This course provides instruction on the use of the KENO-VI Monte Carlo code for criticality safety calculations and the MAVRIC (Monaco with Automated Variance Reduction using Importance Calculations) shielding sequence with 3-D automated variance reduction for deep-penetration problems. KENO-VI is a 3D eigenvalue Monte Carlo code for criticality safety and Monaco is a 3D fixed-source Monte Carlo code for shielding analysis. Both codes use the SCALE Standard Composition Library and the SCALE Generalized Geometry Package (SGGP), which allows for versatile modeling of complex geometries and provides convenient, efficient methods for modeling repeated and nested geometry configurations such as lattices. The MAVRIC sequence is based on the CADIS (Consistent Adjoint Driven Importance Sampling) methodology. For a given tally in a Monte Carlo calculation that the users wants to optimize, the CADIS method uses the result of an adjoint calculation from the Denovo 3D deterministic code to create both an importance map for weight windows and a biased source distribution. MAVRIC is completely automated in that from a single user input, it creates the cross sections (forward and adjoint), computes the adjoint fluxes, creates the importance map and biased source, and then executes Monaco. An extension to the CADIS method using both forward and adjoint discrete ordinates calculations (FW-CADIS) is included in MAVRIC so that multiple point tallies or mesh tallies over large areas can be optimized (calculated with roughly the same relative uncertainty). Both KENO and Monaco use ENDF/B-VII.0 or ENDF/B-VII.1 cross-section data distributed with SCALE to perform continuous energy (CE) or multigroup (MG) calculations. Both codes can also be used with the Fulcrum consolidated SCALE user interface and KENO3D for interactive model setup, computation, output review, and 3-D visualization. Instruction is also provided on the SCALE material input and resonance self-shielding capabilities and the data visualization capabilities within Fulcrum for visualizing fluxes, reaction rates, and cross-section data as well as mesh tallies. KENO-VI and MAVRIC can be applied together to perform an integrated criticality accident alarm system (CAAS) analysis.</p>	ORNL Oak Ridge, TN USA	\$2000*
October 23-27, 2017	<p><b>SCALE Sensitivity and Uncertainty Analysis for Criticality Safety Assessment and Validation</b> Sensitivity and uncertainty analysis methods provide advanced techniques for criticality safety validation including the</p>	ORNL Oak Ridge, TN USA	\$2000*

	<p>identification of appropriate experiments, detailed quantification of bias and bias uncertainty, identification of gaps in available experiments, and the design of new experiments. The Sampler sequence within SCALE provides a flexible tool for quantifying uncertainties due to manufacturing tolerances as well as composition and dimensional uncertainties in criticality safety assessments. This 5-day training class provides a foundation on sensitivity and uncertainty analysis and applies these methods to criticality safety validation applications, as well as instruction on the use of Sampler for uncertainty quantification.</p> <p>Topics covered include:</p> <ul style="list-style-type: none"> <li>• The TSUNAMI sensitivity and uncertainty analysis techniques for determining the sensitivity of the k-eff eigenvalue to cross section uncertainties using both multigroup and continuous-energy physics.</li> <li>• SCALE's comprehensive cross section covariance data library, which is applied to these sensitivity coefficients to estimate the data-induced uncertainty in k-eff.</li> <li>• The TSUNAMI-IP code, which determines the correlation between benchmark and application systems in terms of their shared sources of data-induced uncertainty.</li> <li>• The USLSTATS trending analysis tool, which uses similarity coefficients from TSUNAMI-IP (among other parameters) to estimate the computational bias and bias uncertainty for design and licensing applications.</li> <li>• The TSURFER data adjustment tool, which uses generalized linear least squares to adjust nuclear data parameters to minimize discrepancies between computed predictions and the results of integral experiments; these adjustments can then be used to estimate bias and bias uncertainty in design and licensing applications.</li> <li>• The SAMPLER code for uncertainty assessment, which randomly samples nuclear data and/or system compositions and dimensions to quantify the uncertainty in system k-eff.</li> </ul> <p>This course will cover the theoretical basis for these analysis techniques and will also conduct exercises for attendees to familiarize themselves with these tools. It is recommended that attendees are familiar with the KENO Monte Carlo code or are experienced SCALE users, although these are not necessary prerequisites.</p>		
--	---	--	--

*\*Full-time university students can register at a reduced rate. Both professional and student registration fees are discounted \$200 for each course over one.*

**FOREIGN NATIONAL VISITORS TO ORNL** - *Payment MUST be received at least one week prior to attending the training course. All foreign national visitors must register 40 days before the start date of the training course they plan to attend.*

For more information regarding these courses, visit the website at <http://scale.ornl.gov/>.
